

2024 Billing Guide

For Physicians

2024 Coding Information for Physician Services

Procedures involving the TriNav Infusion Systems include the embolization/occlusion procedure and may include a pre-service angiography that is typically performed during a separate patient encounter. Physicians should select the CPT^{®1} code that most accurately represents the procedures performed. In the case that an existing CPT code does not accurately represent the service provided, physicians should report an unlisted CPT code.

CPT Procedure Codes Related to the Use of the TriNav and TriNav LV Infusion Systems²

CPT Code	Description
Embolization or Occlusion Procedure Codes	
37241	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; venous, other than hemorrhage (eg, congenital or acquired venous malformations, venous and capillary hemangiomas, varices, varicoceles)
37242	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; arterial, other than hemorrhage or tumor (eg, congenital or acquired arterial malformations, arteriovenous malformations, arteriovenous fistulas, aneurysms, pseudoaneurysms)
37243	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for tumors, organ ischemia, or infarction
37244	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation
37799	Unlisted procedure, vascular surgery
Pre-service Catheter Placement and Angiography Codes	
36245	Selective catheter placement, arterial system; each first order abdominal, pelvic, or lower extremity artery branch, within a vascular family
36246	Selective catheter placement, arterial system; initial second order abdominal, pelvic, or lower extremity artery branch, within a vascular family
36247	Selective catheter placement, arterial system; initial third order or more selective abdominal, pelvic, or lower extremity artery branch, within a vascular family
36248	Selective catheter placement, arterial system; additional second order, third order, and beyond, abdominal, pelvic, or lower extremity artery branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)

CPT Code	Description
Pre-service Catheter Placement and Angiography Codes	
75726	Angiography, visceral, selective or supraselective (with or without flush aortogram), radiological supervision and interpretation
75774	Angiography, selective, each additional vessel studied after basic examination, radiological supervision and interpretation (List separately in addition to code for primary procedure)
76499	Unlisted diagnostic radiographic procedure
Imaging Options	
78201	Liver imaging; static only
78800	Rp localization tumor/distribution Rp agent, incl vasc flow, planar, 1 area, 1 day
78803	Rp localization tumor/distribution Rp agent, incl vasc flow, (SPECT), 1 area, 1 day

Coding Tip for 37241 and 37244

Only one embolization code should be reported for each surgical field, including the entire area directly involved in and immediately surrounding the procedure.¹

Pre-Procedural and Intra-Procedural Angiographic Roadmapping

Angiographic roadmapping is often performed several days in advance of the TriNav embolization procedure. This procedure may be reported separately from the embolization procedures performed on a separate day.

Angiographic roadmapping performed intra-procedurally with the TriNav embolization procedure is not separately reported.

Vascular embolization and occlusion procedures (37241-37244) include:

- all associated radiological supervision and interpretation;
- intra-procedural guidance and roadmapping;
- imaging necessary to document completion of the procedure; and
- moderate sedation.

Vascular embolization and occlusion procedures (37241-37244) do not include:

- vessel selection(s) and catheter placement(s);
- ultrasound guidance for vascular access;
- diagnostic studies (eg, diagnostic angiography or venography);
- chemotherapy administration (eg, 96420); or
- injection of a radioisotope (eg, 79445).¹

Description

The TriSalus™ TriNav® and TriNav® LV Infusion Systems are delivery devices with SmartValve® technology, a self-expanding tip at the distal end. The TriNav serves as the conduit for physician-specified agents such as contrast agents, flush solutions, and embolic beads.^{1,2}

RX Only

For the safe and proper use of TriNav and TriNav LV, refer to their individual Instructions for Use.^{1,2}

Indications For Use

The TriNav and TriNav LV Infusion Systems are intended for use in angiographic procedures. They deliver radiopaque media and therapeutic agents to selected sites in the peripheral vascular system.^{1,2}

Contraindications

TriNav and TriNav LV Infusion Systems are not indicated for use in the vasculature of the central nervous system (including the neurovasculature) or central circulatory system (including the coronary vasculature).^{1,2}
