

Honoring Liver Cancer Awareness Month: Advancing Patient Care Together

As we recognize Liver Cancer Awareness Month, TriSalus Life Sciences would like to acknowledge and celebrate the essential work of Interventional Radiologists (IRs) in advancing the care and treatment of patients with liver cancer. The expertise of IRs in delivering innovative therapies, such as TACE and TARE, is pivotal to improving the outcomes of those affected by liver cancers. Multidisciplinary collaboration with other specialists, including medical oncologists, surgeons, and hepatologists ensures patients get the care they need.

At TriSalus, we are committed to supporting the efforts of Interventional Radiologist by providing innovative solutions that enhance therapeutic delivery. Together, we are making significant strides in addressing the challenges of treating liver tumors, with a shared goal of offering better options for patients.

We appreciate the commitment of IRs to improving the lives of liver cancer patients. Thank you for your dedication, and for being at the forefront of innovation in oncology.

Indications For Use

The TriNav Infusion System is intended for use in angiographic procedures. It delivers radiopaque media and therapeutic agents to selected sites in the peripheral vascular system.¹

Contraindications

TriNav is not intended for use in the vasculature of the central nervous system (including the neurovasculature) or central circulatory system (including the coronary vasculature).

Rx Only. For the safe and proper use of the TriNav Infusion System, refer to the Instructions for Use.
