

It's Almost Here: The TriNav® LV Infusion System

You asked. We delivered.

The TriNav® LV Infusion System is launching soon. Designed for vessels 3.5 mm to 5.0 mm, TriNav LV employs the same Pressure-Enabled Drug Delivery™ (PEDD™) approach as TriNav. The PEDD approach has been shown to increase the T:N ratio and improve outcomes for complex patients.^{1,2}

TriNav LV is just one of the significant innovations TriSalus is developing. Guided by input from physicians and driven by our mission to transform patient outcomes, we're dedicated to creating solutions that matter.

Stay tuned for more information on this exciting new addition to the TriNav portfolio!

Indications For Use

The TriNav and TriNav LV Infusion Systems are intended for use in angiographic procedures. They deliver radiopaque media and therapeutic agents to selected sites in the peripheral vascular system.^{3,4}

Contraindications

The TriNav and TriNav LV Infusion Systems are not indicated for use in the vasculature of the central nervous system (including the neurovasculature) or central circulatory system (including the coronary vasculature).^{3,4}

Rx Only

For the safe and proper use of the TriNav and TriNav LV Infusion Systems, refer to their individual Instructions for Use.
