

The TriNav[®] LV Infusion System With SmartValve[®] Technology Is Now Available.

We're thrilled to launch the TriNav[®] LV Infusion System—our latest innovation designed to elevate the care of complex patients.

The Pressure-Enabled Drug Delivery[™] (PEDD[™]) approach has been shown to improve the T:N ratio.¹ Like the original TriNav, TriNav LV employs SmartValve[®] Technology to enable the PEDD approach in larger vessels.

With the introduction of TriNav LV, the TriNav portfolio now covers recommended vessel sizes from 1.5 mm to 5.0 mm, extending the benefits of PEDD to a broader range of patients.

Visit [our website](#) to learn more about TriNav LV and how it may benefit your most complex patients.

For reimbursement information, please click here or contact TriNav Reimbursement Support at reimbursement@TriSalusLifeSci.com.

Physicians who evaluated the TriNav LV Infusion System in a limited market release reported a **97% satisfaction rate**, noting it met or exceeded their expectations.²

Indications For Use

The TriNav and TriNav LV Infusion Systems are intended for use in angiographic procedures. They deliver radiopaque media and therapeutic agents to selected sites in the peripheral vascular system.^{3,4}

Contraindications

The TriNav and TriNav LV Infusion Systems are not indicated for use in the vasculature of the central nervous system (including the neurovasculature) or central circulatory system (including the coronary vasculature).^{3,4}

Rx Only

For the safe and proper use of the TriNav and TriNav LV Infusion Systems, refer to their individual Instructions for Use.
