

Real-World Experience With TriNav LV

The TriNav® LV Infusion System is here! Designed for vessels 3.5 mm to 5.0 mm, TriNav LV employs the same Pressure-Enabled Drug Delivery™ (PEDD™) approach that has been shown to increase the T:N ratio and improve outcomes for complex patients.^{1,2} Interventional Radiologists are already sharing their real-world experiences using the latest TriNav innovation.

Dr Zachary Berman from the University of California, San Diego used TriNav LV to deliver resin Y90 TARE to treat metastatic leiomyosarcoma. Side-by-side imaging from the case shows how TriNav LV significantly improved the tumor targeting compared with a traditional microcatheter, while also decreasing delivery to the normal liver – effectively increasing the T:N ratio. This was confirmed on dosimetry.

You can read the full case study and see all the imaging [here](#)

Target Tumors

**Traditional Microcatheter
MAA SPECT**

**TriNav LV
Y90 SPECT**

Background Liver

**Traditional Microcatheter

Indications For Use

The TriNav and TriNav LV Infusion Systems are intended for use in angiographic procedures. They deliver radiopaque media and therapeutic agents to selected sites in the peripheral vascular system.^{3,4}

Contraindications

The TriNav and TriNav LV Infusion Systems are not indicated for use in the vasculature of the central nervous system (including the neurovasculature) or central circulatory system (including the coronary vasculature).^{3,4}

Rx Only

For the safe and proper use of the TriNav and TriNav LV Infusion Systems, refer to their individual Instructions for Use.
